

PERMANENTLY REMOVE HAIR — IN AN EXCEPTIONALLY FAST, COMFORTABLE TREATMENT.

INDICATIONS

- Unwanted hair

The Forever Bare BBL™ technology delivers a combination of benefits that aren't available on other hair removal devices.

Comfort, safety and effectiveness

Unlike traditional hair reduction devices that apply energy to an area all at once, Forever Bare BBL uses motion technology to deliver a low fluence in multiple pulses, protecting the skin while progressively raising the follicle temperature to the optimal level for hair removal. At the same time, a sapphire plate on the handpiece provides continuous cooling, even at maximum power, to cool the skin before, during and after treatment. This technology for heating and cooling makes Forever Bare BBL safe, effective and comfortable for skin types I through V.

Speed and flexibility

Thanks to BBL's large spot size, Forever Bare BBL is one of the fastest hair-removal treatments on the market. It evenly heats hair follicles throughout the treatment area, minimizing missed spots that are common in other treatments. Like other BBL treatments, Forever Bare BBL comes with adapters for different spot sizes, so you can treat large areas quickly and small areas precisely.

Help patients reveal their soft, smooth skin without the hassle of shaving, tweezing or painful waxing.

REAL PATIENTS. REAL RESULTS.

Skin Type V | 6 months post 3 tx | courtesy of Sciton, Inc.

Forever Bare is a wonderful treatment for both the patients and the operator! It is a very comfortable procedure and one that is performed quickly. An easy to use interface makes it safe and effective. In addition, the motion based technique assures a smooth result without any missed areas! Forever Bare is a great way to introduce new and younger patients to your practice!
